Hannes Alexandersson

Skills

Fullstack graduate from Yrgo at Gothenburg. Skills acquired during my time at Yrgo includes frontend development using frameworks such as React, React Native, Next.js, Laravel and also backend development with frameworks such as Express.js and database handling with MongoDB, Supabase, Firebase, MySQL, MariaDB. We also learned to handle API's and version control with Git, and during my LIA I worked with state management systems such as Zustand. I would say my strong suit is definitely frontend development since that is what I have the most experience with, but I do enjoy backend whenever I get a chance to do it!

EXPERIENCE

Scaffcalc AB, Gothenburg – *LIA (fullstack internship)*

November 2024 – May 2025
